

BIOGEMSE

Bio-intelligent products manufacturing 4 sustainable cities

Building the Future: Bio-Intelligent, Circular &
Safe Construction

PARTNERS

Funded by
the European Union

BIOGEMSE has received funding from the European Union's Horizon Europe research and innovation programme under grant agreement No 101178022.

BIOGEMSE

is a European project pioneering bio-intelligent modular construction products made from sustainable, circular, and safe bio-based materials. Using robotic 3D printing, AI, and digital twins, the project is redefining how we design and build future-proof architecture.

Why it matters

- Greener, safer, and circular materials
- Smarter, AI-driven design inspired by nature
- Modular solutions adaptable to different environments
- European innovation for a sustainable construction sector
